DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/22/2005 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for

establishing a background for determining obviousness under 35

U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 1-4, 6-19 and 21 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Wenzel, U.S. Patent No. 6,180,735. The present invention claims the following open-ended steps: forming a supported activator wherein the supported activator is in mineral oil and contacting the supported activator with a combination consisting essentially of a ligand and a metal compound. Wenzel teaches the mixing of a supported activator and with a transition metal compound formed from a ligand and metal compound. See col. 21, lines 20-32. Wenzel further asserts that any order of mixing will suffice. See id. Wenzel further asserts the use of mineral oil to mix the catalyst followed by polymerization. See col. 21, lines 32-37. The Examiner contends that the addition of carbonyl is immaterial because the claim uses the transitional phrase "comprising." Furthermore taken these embodiments together one of ordinary skill would be motivated to combine supported co-

catalyst/mineral oil with the transition metal compound to form a catalyst ready for polymerization because Wenzel has provided the ingredients and orders of mixing that would suffice leading one of ordinary skill to merely optimize the catalyst preparation and polymerization.

5. The transitional phrase "consisting essentially of" limits the scope of a claim to the specified materials or steps "and those that do not materially affect the basic and novel characteristic(s)" of the claimed invention. In re Herz, 537 F.2d 549, 551-52, 190 USPQ 461, 463 (CCPA 1976). For the purposes of searching for and applying prior art under 35 U.S.C. 102 and 103, absent a clear indication in the specification or claims of what the basic and novel characteristics actually are, "consisting essentially of" will be construed as equivalent to "comprising." If an applicant contends that additional steps or materials in the prior art are excluded by the recitation of "consisting essentially of," applicant has the burden of showing that the introduction of additional steps or components would materially change the characteristics of applicant's invention. In re De Lajarte, 337 F.2d 870, 143 USPQ 256 (CCPA 1964).
